

TOP-Feedback

The student and instructor feedback cycle,
owned entirely by your detachment.

An introduction — what it is, what it does, and how it is used

A feedback app that stores nothing on anyone else's computer

Cadets answer a short form on their phone. Instructors see the results analysed, not just listed. Every record is written to a Google Drive folder your detachment already owns.

Your Google account

No vendor holds your data, because no vendor is involved. If you stop using the app, every response is still sitting in your Drive.

Any device

Runs in a browser and installs to a phone home screen. Works with no signal and sends when the connection returns.

Nothing to buy

No licences, no subscription, no server to maintain. Setup is a Drive folder and about 45 minutes, once.

Feedback nobody can act on

Paper forms get collected, stacked, and never counted.

Survey tools put cadet feedback on a company's servers.

An average hides the very thing you needed to see.

A disclosure of hazing can sit unread in a pile for weeks.

What it replaces

One app that issues the form, collects the responses, runs the statistics, reads the written answers, and flags anything a person needs to see today.

On a phone. Offline. At no cost.

Your folder is the database

Each record is a plain file you can open in Drive — nothing is locked in a format only this app can read.

```
TOP-Feedback/  
  config/      detachment profile and settings  
  users/       accounts: cadets, instructors, admins  
  forms/       feedback form definitions  
  requests/    feedback issued, each with an ID  
  responses/   submitted feedback  
  receipts/    who submitted, kept apart from  
               what they said  
  reports/     exported reports
```

Stop using the app and you still have every response.

Readable in Drive, backed up by Google, recoverable from the trash for 30 days.

Who can read the feedback is a Drive sharing setting.

Not a setting inside this app. That is the access control that actually matters.

WHO USES IT

One app, three doors

Student

Signs in, sees only the feedback assigned to them, submits it once.

Instructor Portal

Creates feedback, reads responses, runs the analysis.

Database Administration

Creates accounts and resets passwords.

Only what is assigned to you

Filtered by school year, semester, class and due date. Anything already submitted drops off the list.

INSTRUCTIONS

Answer honestly — your name is never stored with your answers.

Your answers are anonymous

You are signed in as hall rae so the app can check you off and stop a second submission. That record is kept in a separate list from your answers — nothing links what you write to who you are.

Submit feedback

TOP-Feedback — your detachment's data stays in your own Google account.

Nine ratings, every one named

Detrimental, Significant, Unfavorable, Minor, Neutral, Slight, Favorable, Major, Outstanding.

No numbers on screen

A visible number invites people to average it in their head while answering.

Written answers capped at 250 words

With a live counter as they type.

Built for the walk out of the classroom

Installs to the home screen

Opens like an ordinary app. No address for anyone to remember.

Works with no signal

A submission made offline is saved on the device, shown as pending, and sent automatically when the connection returns.

Nothing is lost to a dropped connection

Two things to do, both one click away

A standardized form, in about two minutes

The screenshot shows the 'Create feedback' form in the TOP-Feedback Instructor Portal. The form is titled 'Create feedback' and includes a feedback ID 'FB-2026-0001'. It is divided into several sections: 'What the feedback is about' (with fields for class/event name, AS level, school year, semester, open date, and due date), 'Who receives it' (with radio button options for 'Everyone at this AS level', 'Selected students', and 'Everyone on the roster'), and 'Questions' (with three question entries, each having a rating system and a 'Required' checkbox). The form also includes a 'Preview' button, a 'Save draft' button, and a 'Issue to students' button.

Name the class or event

Set the AS level, term and dates

Scheduled forms stay hidden until they open.

Choose who receives it

Everyone at that level, or named cadets.

Add questions — three minimum

A rating or a written answer. No maximum.

Every form gets an ID

Such as FB-2026-0001, to quote in conversation.

Everything an average on its own would hide

Mean, median, range and spread

The distribution across every rating

Shape you can see rather than infer.

An agreement score from 0 to 1

Did they actually agree, or just average out?

Outliers, found robustly

Measured against the median, so one extreme rating cannot hide itself.

**An average of 5 can mean everyone shrugged —
or that half the flight thought it outstanding
and half thought it harmful.**

Same number. Opposite situations. Only one of them needs acting on.

TOP-Feedback finds the split, says so plainly, and tells you the average describes nobody — so you read both groups instead of the middle.

Read the ones that matter first

Sentiment, ranked most negative first

Handles negation and emphasis, so 'not helpful' and 'extremely helpful' both score correctly.

Every answer is shown

Answers the word list cannot read are labelled, never hidden.

It runs on the device

No cloud service sees your cadets' words. That is why it is a word list and not a model, and the accuracy limits are stated on screen.

Word cloud sized by how many people used a word, not how often it appears.

Nothing important sits unread

Safety screen

⚠️ 1 answer flagged for review

These contain language matching the safety and security word lists. A match is a prompt to read the response, not a finding — the list cannot tell "we discussed hazing prevention" from "I was hazed". Read each one and follow your detachment's reporting procedures.

Hazing and abuse of authority

Conduct that degrades or endangers a cadet, or misuse of position.

⚠️ Critical

WHAT SHOULD CHANGE NEXT TIME?

hazed

made us do

A senior cadet **hazed** the new flight members and **made us do** push ups until we cried.

Aug 13, 2026 · AS200 Leadership Lab — Drill Block 3

The word lists live in `js/analysis/lexicon.js` and are meant to be edited — add the terms your detachment actually uses.

Every written answer is screened

Hazing, sexual harassment, discrimination, violence, self-harm, substances, integrity.

Matches are highlighted in context

A prompt, never a finding

It cannot tell 'we discussed hazing prevention' from 'I was hazed'. A person reads it and decides.

14

Anonymous, and still able to chase people

How it works

The cadet signs in, so the app knows who they are. It writes a receipt in a separate folder, then drops the name. The response itself carries no identity.

What that buys

You can say 'two cadets still owe feedback' about responses nobody can attribute — and nobody can submit twice.

The honest limit

With very few responses a single answer can be identified by elimination. So anonymous results stay hidden until three people have responded.

Safety flags are the deliberate exception: a disclosure cannot wait for a third response, so the app tells you one exists and warns that opening it may identify the author.

Accounts your detachment controls

Add cadets one at a time or import a whole class by CSV. Passwords are generated and handed to you once.

Getting started

1

Create the folder

A Google account the detachment owns, and a folder named TOP-Feedback.

2

Register the app

One free Google Cloud project, so the app can reach that Drive. About ten minutes.

3

Run the wizard

Paste the folder link, create your administrator account, add cadets.

Step by step, with screenshots: [TOP-Feedback Setup Guide \(PDF\)](#).
